FusionDataCLI

A terminal browser for Autodesk Platform Services (APS) Manufacturing Data Model. Navigate your Fusion hubs, projects, folders, and designs from the command line.

Install

Homebrew (macOS / Linux) — recommended

```
brew install schneik80/fusiondatacli/fusiondatacli
```

Or download the latest binary for your platform from Releases.

macOS (Apple Silicon)

```
VERSION=$(curl -s
https://api.github.com/repos/schneik80/FusionDataCLI/releases/latest |
grep '"tag_name"' | cut -d'"' -f4 | tr -d v)
curl -L
"https://github.com/schneik80/FusionDataCLI/releases/latest/download/Fusio
nDataCLI-${VERSION}-darwin-arm64.tar.gz" | tar xz
sudo mv fusiondatacli /usr/local/bin/
```

macOS (Intel)

```
VERSION=$(curl -s
https://api.github.com/repos/schneik80/FusionDataCLI/releases/latest |
grep '"tag_name"' | cut -d'"' -f4 | tr -d v)
curl -L
"https://github.com/schneik80/FusionDataCLI/releases/latest/download/Fusio
nDataCLI-${VERSION}-darwin-amd64.tar.gz" | tar xz
sudo mv fusiondatacli /usr/local/bin/
```

Linux (amd64)

```
VERSION=$(curl -s
https://api.github.com/repos/schneik80/FusionDataCLI/releases/latest |
grep '"tag_name"' | cut -d'"' -f4 | tr -d v)
curl -L
"https://github.com/schneik80/FusionDataCLI/releases/latest/download/Fusio
nDataCLI-${VERSION}-linux-amd64.tar.gz" | tar xz
sudo mv fusiondatacli /usr/local/bin/
```

Windows — download `fusiondatacli-{version}-windows-amd64.zip` from the Releases page and add the binary to your `PATH`.

Usage

```
fusiondatacli
```

On first run the app opens your browser for Autodesk sign-in. After authenticating, navigate with the keyboard:

Key	Action
↑ ↓ / j k	Move cursor
→ ↵ / l	Enter folder / open details
← / h	Go back
o	Open in browser
f	Open in Fusion desktop
d	Toggle details panel

Key	Action
`t`	Cycle color theme
`a`	About / license
`r`	Refresh
`?`	Debug log
`q`	Quit

Non-US hubs

If your Fusion hub is in EMEA or Australia, set the region before running:

```
APS_REGION=EMEA fusiondatacli   # Europe, Middle East, Africa
APS_REGION=AUS  fusiondatacli   # Australia
```

Details panel

Press `→` on any design to open the details panel. It shows:

- File size and current version number
- Created and last modified date and user
- Component metadata: part number, description, material, milestone flag
- Full version history with save comments

Requirements

- An Autodesk account with access to at least one Fusion Team hub
- macOS 12+, Linux, or Windows 10+
- Port `7879` available locally during sign-in (used for the OAuth callback)

Building from source

Requires Go 1.22+.

```
git clone https://github.com/schneik80/FusionDataCLI
cd FusionDataCLI
```

With your own APS app (register a public client at aps.autodesk.com/myapps, redirect URI `http://localhost:7879/callback`, scope `data:read`):

```
make build CLIENT_ID=your-client-id
```

Or store your client ID in a git-ignored file:

```
echo "your-client-id" > .aps-client-id
make build
```

Local dev without an embedded client ID (supply via env var at runtime):

```
make dev
APS_CLIENT_ID=your-client-id ./fusiondatacli
```
